## **FireMaps Installation Guide**

FireMaps is available for Windows and MacOS running 64-bit operating systems. FireMaps is downloadable as ZIP files and does not require running an installer as the program and associated files are all self-contained within the folder.

## **Installation for Windows**

Download FireMaps zip file: <u>https://maps.fpaafiremaps.com.au/Firemaps\_win\_x64.zip</u> using your web browser. Save the zip file to a folder on your computer or your downloads folder. The desktop will suffice if you are happy storing it there. In the example below, the zip file is stored in a folder called "MyFolder" on the G: drive:

Extract the zip file here. To do so, right-click on the zip file and select "Extract All...".

You will be asked where to extract the files too. Select the current folder - or elsewhere as you decide to put it.

<u>E</u>xtract Cancel

When the extract is complete open the Firemaps\_win\_x64 folder:

## **Installation for MacOS**

Download FireMaps zip file: <u>https://maps.fpaafiremaps.com.au/Firemaps\_MacOS.zip</u> using your web browser. Open the downloads folder:

**FIREMAPS** 

Drag and drop the FIreMaps MacOS folder into your Applications folder:

Hold down CONTROL key and click on "FireMaps\_Mac\_Launcher":

Click on the Open menu option. You will be prompted with a security alert to trust this application. Click on "Open":

0	"FireMaps_Mac_Launcher" is from an unidentified developer. Are you sure you want to open it?		
	Opening "FireMaps_Mac_Launcher" will always allow it to run on this Mac.		
	Safari downloaded this file today at 4:13 PM from maps.firemaps.com.au.		
	Open Cancel		

FireMaps will then start. You only have to do this process once. In future you can just double-click on the "FireMaps Mac Launcher" file to start FireMaps.
